Airport Hive®

Aeronautical Billing

Simplifying the complex with our Billing module

A Smarter Approach to Airport Billing

Managing airport finances has never been more complex or more critical.

As the aviation industry continues to evolve, airports face mounting pressure to streamline operations, reduce administrative burden, and ensure transparent, accurate financial processes.

Traditional billing systems often struggle to keep pace with the demands of a modern airport environment, especially when dealing with high data volumes, intricate airline agreements, and diverse charging models.

Airport Hive Billing is built to meet these challenges head-on.

Precision in a Demanding Landscape

Airports are dynamic environments. Fee structures can be nuanced and variable, reflecting everything from landing charges and passenger fees to fuel surcharges, gate rentals, and incentive agreements. For finance teams, this complexity translates into a significant risk of error, inefficiency and missed revenue.

Airport Hive Billing addresses this with a powerful, rules-based engine that automates fee calculations, postings, and invoicing ensuring consistent, accurate results, even across high-volume billing runs. Manual processes are reduced to a minimum, eliminating much of the traditional administrative overhead and dramatically reducing the risk of error.

Transparency and Control

One of the most significant benefits of a modern billing system is transparency. With Airport Hive Billing, finance teams gain full visibility into every transaction, from service delivery to payment receipt. This not only aids auditing and compliance, but also builds trust with stakeholders by offering clear, detailed, and verifiable financial records.

It also reduces the risk of revenue leakage or disputes, giving airport operators greater confidence in their financial reporting and partner agreements.

Designed for Flexibility and Scale

Whether handling multiple billing methods, adapting to local tax regulations, or working across international currencies, Airport Hive Billing is designed for flexibility. It supports custom billing cycles and accommodates diverse customer requirements, from low-cost carriers to major global airlines.

Airports can also manage multiple billing runs in parallel, supporting everything from day-to-day transactions to complex incentive agreements and seasonal variations.

Manage multiple billing runs at the same time through our user friendly, familiar interfaces

## Better Cash Flow and Cost Efficiency

By automating the entire billing lifecycle, from fee calculation to invoice generation and payment tracking, airports can significantly reduce labour costs and paperwork. This automation not only shortens the billing cycle but also strengthens cash flow by accelerating the time between service delivery and payment collection.

Digitisation also reduces the need for physical storage and manual reconciliation, helping airports move toward greener, more cost-effective operations.

Enabling Better Relationships

Efficient billing plays a direct role in customer satisfaction. Inaccurate or delayed invoices frustrate partners and strain commercial relationships. Airport Hive Billing ensures that airlines, handlers, and service providers receive accurate, timely billing with clear breakdowns and fewer errors. This makes it easier to resolve any discrepancies quickly and collaboratively.

Overall, this supports better communication, stronger partnerships, and a more agile approach to commercial management.

Unlocking Strategic Insights

Beyond the operational benefits, Airport Hive Billing delivers a wealth of financial data that supports detailed business analysis. Airports can identify trends, assess the effectiveness of discounting strategies, and make informed decisions based on real-time, structured insights. The system's rich statistical capabilities help finance leaders move from reactive to proactive revenue management.

Strategy Beyond Billing

Airport Hive Billing is more than just a billing tool, it's a strategic instrument that helps airport operators optimise financial performance, reduce administrative overhead, and build better relationships with customers and partners. As airport businesses seek smarter ways to operate in a competitive and constantly evolving sector, embracing intelligent, automated solutions like Airport Hive Billing are no longer a luxury, but a necessity.

Key Features & Benefits for Airport Operators

Automated, Accurate Billing

Advanced rules-based engine automates complex billing calculations, postings, and invoicing.

Greatly reduces manual effort, eliminates errors, and ensures precise billing across all charge types.

Complete Billing Lifecycle Management

Manages the entire billing process from service recording to payment reconciliation.

Accelerates cash flow, shortens billing cycles, and improves financial control.

Full Transparency & Audit Ability

Detailed transaction tracking with complete audit trails.

Simplifies compliance, strengthens trust with partners, and reduces disputes.

Supports Complex Charging Models

Handles landing fees, passenger charges, fuel surcharges, seasonal incentives, and more.

Allows airports to easily manage variable fee structures and bespoke airline agreements.

Multi-Currency & Tax Ready

Built-in support for international currencies and tax regimes.

Enables accurate billing for global operations and compliance with local financial regulations.

Key Features & Benefits for Airport Operators (Cont...)

Flexible Billing Cycles & Parallel Runs

Supports custom billing cycles and multiple billing runs simultaneously.

Finance teams gain flexibility to manage billing frequency and complexity without delays.

Seamless Airline & Partner Relationships

Timely, accurate invoices with clear financial breakdowns.

Enhances partner satisfaction and reduces commercial friction.

Actionable Financial Insights

Real-time financial analytics and reporting tools.

These insights empower finance leaders with data-driven insights to optimise revenue and commercial strategies.

User-Friendly Interfaces

Intuitive dashboards and familiar UI for billing configuration and management.

Speeds up user adoption and reduces training needs.

Scalable & Future-Proof Architecture

Designed to grow with your airport, supporting evolving business needs.

Its structure protects your investment and supports long-term operational agility.
